

OAK LANE PRINTING PURCHASES HIGH SPEED FULLY AUTOMATED HEIDELBERG IN-LINE UV COATING PRESS.

Leading printing and fulfillment company expands offerings with purchase of a unique Heidelberg press.

Philadelphia, PA- Oak Lane Printing, Inc., one of the nations leading providers of printing, fulfillment and mailing services recently purchased an **eleven** color printing press with perfecting and in-line UV coating capabilities. Manufactured by Heidelberg, this state of the art machine is one of the first of its kind to be available in the Northeastern United States.

This press will enable Oak Lane Printing to offer “One Pass Productivity”, which allows printing on both sides in a single pass. It meets the highest quality levels by using UV inks, which allow ink saturation at its maximum level on various substrate including coated paper and synthetic materials such as plastic.

As well as two sided printing, this press will also in-line UV Coat, a substantial savings for those in need of this dramatic effect. Extended pre-set functions reduce setup work to a minimum. Integration into their digital workflow reduces make ready times and results in fast job throughput.

Michael Dubowitch, CEO of Oak Lane Printing, comments that “with turnaround times getting shorter and shorter, and demand for critical color and clarity not withstanding, we can offer our clients a product that is unsurpassed in our industry”.

To learn more about this unique technology, or to discuss the handling of your upcoming project, call your Oak Lane Printing account executive today. Or visit us on our website at www.oak-lane.com.
