Elk Environmental Services Expands Fleet

Elk Environmental Services, January 1, 2007 --- Elk Environmental Services officially announces the addition of a Presvac Vacuum Truck to its fleet of equipment.

Established in 1988, Elk Environmental Services is recognized as a leader in the environmental industry. Elk offers an extensive line of services that include: 24-hour emergency spill response, transportation and disposal of hazardous and non-hazardous waste, drum and bulk waste management, storage tank management, contaminated soils delineation and remediation, facility decontamination, environmental and general demolition, asbestos/lead abatement, universal waste management, lab packing, and environmental training in accordance with OSHA, DOT and RCRA.

While the addition of a single piece of equipment may not appear to be impressive, the increase in service capabilities is substantial. The Presvac Vacuum Truck with a high volume blower attachment is capable of maintaining negative 25-inches of mercury vacuum while drawing through a 6-inch line. This capacity can lift 4 to 5-inch diameter of stone through a 6-inch line approximately 20-feet in a vertical direction. This unit is designed and built to handle heavy sludges, solids and liquids. The Presvac can be used with a secondary containment vessel, such as a vacuum box, or the tank can be elevated and opened, using a rear hatch, allowing the solids to be dumped. The filter system enables the unit to handle both hazardous and non-hazardous materials while minimizing the release of air-borne particulates. This system makes the unit ideal for handling industrial cleaning applications in a variety of settings.

The Presvac has a capacity of 3,200-gallons, and can haul approximately 2,200-gallons over the road. The unit comes equipped with 100 feet of 4-inch vacuum line. Options include 4-inch vacuum line and 6-inch flexible (ABS Flex Pipe) vacuum line.

For additional information on the services Elk Environmental can provide to your company, please call 610-372-4760.
