

mindSHIFT ServerRecovery Solution Replicates Server Software and Data

More Effective than Tape Backup But Less Costly than Fully Duplicative Environments

Fairfax, VA— June 12, 2007 — mindSHIFT Technologies, a leading provider of managed IT services, VoIP, compliance and professional services to small and medium-sized organizations, announced today a new disaster recovery solution, ServerRecovery. ServerRecovery replicates data in real-time between an organization's servers and mindSHIFT's highly secure and available data center environment.

“Business operations can be disrupted by a number of factors, including device failure, human error or Mother Nature,” said Bill Webb, Vice President of Product Management at mindSHIFT. “One of the most fundamental components of a basic disaster recovery plan is ensuring access and availability to your most critical business data. ServerRecovery is designed expressly for this purpose by ensuring your data is replicated to redundant servers.”

mindSHIFT's ServerRecovery incorporates CA XOsoft™ WANSync™ to create a cost-effective, comprehensive and transparent data replication solution that replicates the data on primary production servers to one or more servers located in mindSHIFT's data center. This enhances mindSHIFT's comprehensive suite of disaster recovery solutions, which includes online backup of desktops and servers as well as redundant network components and connectivity.

With the ServerRecovery solution, mindSHIFT manages the replication to ensure an organization's data is synchronized between the primary and replica environments. In the event of a disaster, mindSHIFT works with a customer to redirect affected users to the replicated servers. Employees are up and running and business operations continue with minimal impact. Combining ServerRecovery with mindSHIFT's hosting services, customers can gain robust data center facilities for geographic diversity and disaster recovery.

“For the small to medium-sized business, ServerRecovery is a great balance between expensive, fully duplicative environments and having no recovery solution other than the often unreliable tape backup,” Webb said.

ServerRecovery is available immediately.

About mindSHIFT Technologies, Inc.

With operations in Boston, New York, Philadelphia and Washington D.C., mindSHIFT is a leading Managed Services Provider (MSP) offering managed IT services, VoIP, compliance and professional services to small and medium-sized organizations. The company's portfolio of managed services provides a comprehensive solution which includes such critical services as email management and administration, electronic backup for servers and desktops, virus and spam protection, desktop support, and server management. Managed services customers are supported by both a 24-hour Network Operations Center for proactive management support and a call center which diagnoses

and resolves all end-user desktop issues. For advanced and larger businesses, the company provides business application migrations, storage area network upgrades and complex hosting applications. Additionally, mindSHIFT has superior expertise and experience in meeting the compliance requirements of financial services firms, as well as the complex demands of the legal community for the integration of applications such as document management.
